## Abbreviations and Acronyms

- AASHTO – American Association of State Highway and Transportation Officials
- ALF: Accelerated loading facility
- AQC: Acceptance quality characteristic
- ASTM: American Society for Testing and Materials
- BMD: Balanced Mixture Design
- BRIC: Binder-rich intermediate course
- CalTrans: California DOT
- CT<sub>trans</sub>: Cracking index
- DOT: Department of transportation
- ESAL: Equivalent single axle load
- FHWA: Federal Highway Administration
- FI: Flexibility Index
- HPTO: High performance thin overlay
- HWT: Hamburg Wheel Tracking Test
- IDEAL: Ideal cracking test
- IDOT: Illinois DOT
- I-FIT: Illinois Flexibility Test
- JMF: Job mix formula
- LaDOTD: Louisiana Department of Transportation and Development
- LPLC: Lab-produced lab-compacted
- MaineDOT: Maine DOT
- MPL: Material producer list
- NCAT: National Center for Asphalt Technology
- N<sub>design</sub>: Design gyrations
- NJDOT: New Jersey DOT
- NMAS: Nominal maximum aggregate size
- OT: Overlay Test
- P<sub>c</sub>: Percent of asphalt binder in mixture
- PG: Performance grade
- PMS: Pavement management system
- PPLC: Plant-produced lab-compacted
- QA: Quality assurance
- RAP: Reclaimed asphalt pavement
- RAS: Reclaimed asphalt shingles
- RBR: Reclaimed binder ratio
- SGS: Superpave gyratory compactor
- SIP: Stripping inflection point
- SMA: Stone matrix asphalt
- TSR: Tensile strength ratio
- TxDOT: Texas DOT
- UNR: University of Nevada-Reno
- VDOT: Virginia DOT
- VFA: Voids filled with asphalt
- VMA: Voids in the mineral aggregate

## Why do you care?

## What are you going to get out of this?

Provide examples of different approaches to BMD implementation based upon different factors for agencies.

Office of Innovation Implementation

U.S. Department of Transportation  
Federal Highway Administration  
RES-URICE CENTER

## Preview of Takeaways

*Demonstrate how BMD approaches will be very different for different agencies; representative of their goals, capabilities, and program attributes.*

### Outline

- Background
- Differences in:
  - Benefits
  - Goals
  - Distresses for Tests
  - Validation of BMD
  - Quality Assurance programs
  - Training & Certifications
- Implementation Examples

RES-URCE CENTER

## Background

U.S. Department of Transportation  
Federal Highway Administration

RES-URCE CENTER

## Definitions

**What is BMD?**

- AASHTO PP 105-20: "BMD is an asphalt mix design using performance tests on appropriately conditioned specimens that address multiple modes of distress taking into consideration mix aging, traffic, climate, and location within the pavement structure."

Design "philosophy" used to optimize the mix performance against distresses pertinent to the climate & traffic specific to the region where it will be placed.

TRB's *Transportation Research Circular E-C280: Glossary of Terms for Balanced Design of Asphalt Mixtures* provides a reference document for usage of Balanced Mix Design terminology by the asphalt mixtures community in the United States.

## Common Performance Tests in U.S.

- Many State DOT's moving to BMD considering use of IDEAL-CT and HWTT
  - Balance desire for validity, performance prediction, and practicality

## Background

**Case Studies of Key State DOTs (Virtual Site Visits)**

- Pre-visit kickoff & planning web conferences.
- Review of agency documents (policy, specifications, reports, etc.).
- 2-4 day virtual site visit.
  - Obtain detailed understanding of agency practices & lessons learned.
- Products
  - Individual State DOT site visit reports.
  - Overall summary report
  - Tech Brief

### Overall BMD Implementation Process 8 Tasks That Can be Undertaken (Schedule Example)

Task	Sub Task	Description	Year
			1 2 3 4 5 6 7
1. Understanding the why and identify of Performance Specifications	1.1	Identify all Changes	1
	1.2	Establishing Stakeholders Partnership	1
	1.3	Doing Your Homework	1
	1.4	Establishing Goals	1
	1.5	Writing the Tests	1
	1.6	Identifying Available External Technical Information and Support (if available)	1
	1.7	Developing an Implementation Timeline	1
2. Selecting Performance Tests	2.1	Identifying Primary Modes of Distress	1
	2.2	Identifying and Assessing Performance Test Appropriateness	1
	2.3	Validating the Performance Tests	1
3. Performance Testing Equipment Acquiring, Managing Resources, Training, and Evaluating	3.1	Acquiring Equipment	1
	3.2	Managing Resources	1
	3.3	Conducting Trial Testing	1
	3.4	Evaluating Performance Tests	1
	3.5	Conducting Peer Laboratory Studies	1
	3.6	Conducting Peer Laboratory Studies	1
4. Establishing Baseline Data	4.1	Assessing History of Data & Information Management System	1
	4.2	Conducting Benchmarking studies	1
	4.3	Conducting Studies Projects	1
	4.4	Analyzing Production Data	1
	4.5	Obtaining Data to Align Annual Mileages, Controlling Local Materials	1
5. Specifications and Program Development	5.1	Sampling and Testing Plans	1
	5.2	Pay Adjustment Factors (if Part of the Goals)	1
	5.3	Developing the Specifications and Criteria	1
	5.4	Conducting Trial Projects	1
	5.5	Final Review and Approval Revisions	1
6. Training, Certifications, and Accreditation	6.1	Developing and/or Updating Training and Certification Programs	1
	6.2	Establishing or Updating Laboratory Accreditation Program Requirements	1
7	Initial Implementation		

Not all tasks may be applied/considered.

Considerations to:

- Organizational structure, staffing, workspace, asphalt tonnage, etc.
- Industry experiences & practices.

Inter-related tasks or subtasks activities.

U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER

### So similar yet so different....

**BMD Similarities**

- Collaboration with Stakeholders
- Doing your homework
- Inter-laboratory studies
- Benchmarking

**BMD Differences**

- Benefits
- Goals
- Distresses for Tests
- Validation of BMD
- Quality Assurance programs
- Training & Certifications

Office of Innovation Implementation U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER 14

### Different "Why's"

U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER

Office of Innovation Implementation U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER

### The "Why" & Benefits of BMD

State DOT Examples of the "Why" / Motivation

- Improve performance.
- Recycled materials
- Building long-life asphalt pavements (LLAPs) that can last more than 30 years.
- Immediate need to address the premature failures from the use of recycled materials.
- Use higher quantities of RAP for economics and environment.
- Address premature failures.
- Allow innovative and recycled materials.
- Address ravelling and durability issues even though PWL volumetric properties were acceptable.
- Superpave implementation led to durability and cracking distresses.
- Adjusting volumetric properties did not improve performance.
- Superpave implementation led to durability and cracking distresses.
- Adjusting volumetric did not improve performance especially mixtures with RAP.

Office of Innovation Implementation U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER 16

### The "Why" & Benefits of BMD

State DOT Examples of the Benefits

- LaDOTD**: Researching/quantifying cost benefits
- IdOT**: Quality Improvements
- Caltrans**: Long-life pavements, eliminate future construction lane closures, Reduce greenhouse gas emissions
- MaineDOT**: Ravelling costs \$15M in total service life per year. Now benefits of extending service life is equivalent to \$7.5M cost savings per year.
- NJDOT**: Pavement performance improved as documented through the PMS & specific studies on RPTD & BRIC
- Texas DOT**: ~\$80 million of annual savings estimated (based on 15-20% RAP). More flexibility to contractors without sacrificing performance.
- VDOT**: Economical & environmentally-friendly mixtures without jeopardizing performance. Improved in-place pavement density.

Office of Innovation Implementation U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER 17

### Different Goals

U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER

Office of Innovation Implementation U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER

### Establishing Goals

- BMD program goals are State-specific.
- Goals help guide decision making.
- Overall BMD program scope need to be defined.

**Goals defined with considerations to:**

- State DOT's organizational structure, staffing level, workspace, annual asphalt tonnage, etc.
- Industry experiences and practices.

**Scope for the application of the BMD program onto projects:**

- Varies by State DOTs.
- Most significant factors observed: mixture quantity & roadway/corridor classification.

**Establishing BMD Goals is important for any agency moving to implement!**

U.S. Department of Transportation  
Federal Highway Administration  
RES-OURCE CENTER  
19

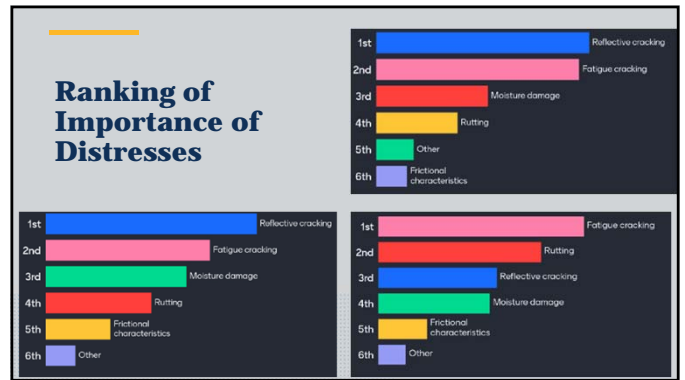

### Establishing Goals

State DOT	Project Scope	Goal: Design	Goal: Acceptance
Caltrans	High-traffic projects with $\geq 100,000$ tons of asphalt mixture produced.	X	X
IDOT, LaDOTD	All projects (phased approach).	X	X
MaineDOT	All interstate & high investment projects.	X	
NJDOT	Evolving from: specialty mixture design/ specialty acceptance/ BMD for dense-graded mixtures.	X	(X)
TxDOT	All mixtures / phased implementation.	X	X

20

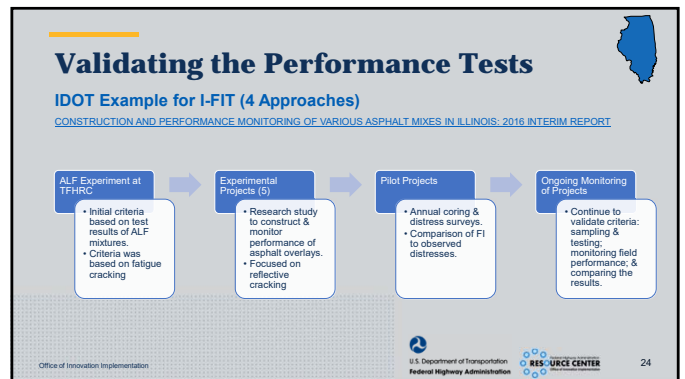

### Different Distresses

U.S. Department of Transportation  
Federal Highway Administration  
RES-OURCE CENTER  
Office of Innovation Implementation

### Different Approaches to Relationship Confirmation and Criteria Development

U.S. Department of Transportation  
Federal Highway Administration  
RES-OURCE CENTER  
Office of Innovation Implementation

### Validating the Performance Tests

NJDOT Example for OT (3 Approaches)

- SPS-5 Sections**
  - Testing of asphalt mixtures.
  - Comparison of test results with the field performance.
- Pavement Management System (PMS)**
  - Building a database of test results.
  - Comparison of field performance to lab test results.
  - Identify cracking type and mechanism.
  - Performance of conventional and proprietary mixtures.
- Robust Validation of Test Criteria**
  - Ongoing Monitoring of Projects
    - Specific select projects.
    - Continuous communication and partnership between material, pavement design, and pavement management groups.

U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER 25

### Validating the Performance Tests

Wisconsin DOT

- WisDOT assessing long-term field performance of BMD pavements validate criteria through construction of experimental test sections.
- Range of HWTT CRD and  $CT_{Index}$  is more important than specific materials.
- 500 ft test sections  $\approx$  75 tons per surface layer.

HWTT Corrected Rut Depth	IDEAL $CT_{Index}$ (after 6-hours @ 135°C aging)	
	> 65	< 35
> 7.0 mm	1	3
< 3.5 mm	2	4
V-grade binder	5	6

Source: NCAT

U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER 26

### Different Approaches to Quality Assurance

U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER

### Program Development & Initial Implementation

Specifications and Program Development (Cont'd)

- Based on State DOT goals (Sub-Task 2.4):
  - Acceptance & quality control options.

State DOT	Acceptance
Caltrans, LaDOTD, VDOT	Volumetric properties with performance tests for information.
NJDOT, TxDOT	Surrogate performance tests correlated to mix design approval tests.
IDOT, NJDOT, MaineDOT	Actual performance tests (same used during mix design).
NJDOT	Performance tests with pay adjustment factors.

**BMD tests alone likely not enough to ensure consistency and quality.**

U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER 28

### How do you envision BMD being integrated into QA?

Scenario	Percentage
Don't use BMD within production use existing AQCs	0%
Verify BMD properties of start-up (initial verification) then use existing AQCs	17%
Verify BMD properties during production less frequent than typical AQCs; use existing AQCs for pay	83%
Repeal existing AQCs during production	0%

U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER 29

### Different Training and Certifications

U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER

### Training & Certifications

**Caltrans**

- Performance tests in both lab accreditation & tester certification (AASHTO T 321, 324, 378, etc.)
- Just-in-time training from UCPRC.
  - Before the start of project.
  - On performance testing & sample preparation.
  - Included industry & Caltrans.
  - UCPRC staff visited contractors' labs for training.

**TxDOT**

- Hot Mix Asphalt Center (HMAC) certification program –TXAPA.
  - Tex-242-F Hamburg Wheel-Tracking Test.
  - Training videos provided (<https://vimeo.com/user33086364/related-procedure-videos>).
- Labs must also participate in the Annual State-wide HWTT proficiency program.

31

### Different Implementation

32

### Program Development & Initial Implementation

**Initial Implementation: IDOT Example**

- 2019: Implemented I-FIT on all interstate projects with additional projects approved by Central Office for a total of 27 projects statewide.
- 2020: Original plan was a full Implementation of I-FIT.
  - Postponed by IDOT in order for contractors to gain more experience & become reasonably comfortable with performance test (based on contractors' feedback).

33

### Program Development & Initial Implementation

**Initial Implementation: IDOT Example (Cont'd)**

- 2021: Planning for the implementation of I-FIT thresholds in design & production for short-term aged specimens (including higher thresholds for SMA & IL-4.75 mixtures).
- 2022: Fully implemented I-FIT thresholds in design and production for short-term and long-term aged specimens.
- 2023: Allow terminally blended binder modifiers in non-polymer modified binders in conjunction with new binder performance testing protocol.

34

### Program Development & Initial Implementation

**Initial Implementation: IDOT Example (Cont'd)**

- Many contractors chose to invest in equipment, especially those operating in remote areas.
  - Some contractors partnered in equipment purchasing & ownership.
- Lab workspace can be challenging.
  - Contractor converted a storage room into a temp-controlled room to house performance testing equipment.
  - In one instance, contractor had to acquire interchangeable table jigs due to space limitation.
- Contractors have challenges in acquiring qualified technicians.
  - Having to run performance tests added to that challenge.
  - Additional training on equipment and test result calculations needed.
- No issues or challenges in meeting in-place density requirements.
- Key for success: partnership & continuous discussion between IDOT, industry, IAPA, & universities.

35

### Program Development & Initial Implementation

**Initial Implementation: IDOT Example (Cont'd)—Mix Design (Design & Acceptance)**

36

► Task 8

### Program Development & Initial Implementation

Initial Implementation: IDOT Example (Cont'd)

- Specs for performance testing: **T 393-21**

Mixture Type	HNTB (Minimum Modified AASHTO T 324, 1.5 in. max. Blat Depth as a Minimum Number of Wheel Passes)				FH (Minimum Modified AASHTO T 124)		TS (Minimum Modified AASHTO T 124) - Limited	
	PG 48 XX (or Better)	PG 44 XX	PG 70 XX	PG 76 XX (or higher)	Shore Term Aging	Long Term Aging	Non-Polymer Modif. PG	Polymer modified PSP
High ESAL T <sub>2-5</sub>	≥ 3,000	≥ 7,500	≥ 15,000	≥ 20,000	0.0	1.0*	0.40	2.80
ESAL T <sub>2-5</sub>	-	-	≥ 10,000	≥ 13,000	0.0	1.0*	-	-
Low ESAL T <sub>2-5</sub>	-	-	-	-	0.0	1.0*	-	-
SMA T <sub>2-5</sub>	≥ 3,000	≥ 7,500	≥ 15,000	≥ 20,000	16.0	10.0	-	-
MBSAL T <sub>2-5</sub>	-	-	-	-	16.0	10.0	-	-

**Removed in 2022 Spec Book**

**VFA limits Removed in 2022 Spec Book**

\*Indicates not applicable. Beginning in 2021. \*Required for surface courses only beginning in 2022. \*Production mixture requirement. Mixture design long term aging FI is minimum of 5.0. \*Average polymer modified PG XX-28 or lower binders shall have a minimum TS of 70 psi.

U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER 37

► Task 8

### Program Development & Initial Implementation

Initial Implementation: NJDOT Example

- Specialty asphalt mixtures: ~10% of total asphalt tonnage.
  - 5.1% in 2015 → 16.8% in 2018.
  - 8.3% in 2019. Drop in the percent use mainly attributable to:
    - Project prioritization & selection process.
    - Resurfacing projects not continuously ranking high in the process.
    - Delays in the procurement process.
    - Complexity of requirements stipulated in the procurement rules pushed back some of the projects until next year.
- Selection of a specialty mixture based experience.
  - Considering a project selection document to guide to junior staff.

U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER 38

► Task 8

### Program Development & Initial Implementation

Initial Implementation: NJDOT Example (Cont'd)

- Ultimately, implement BMD for dense-graded mixtures.
- Plan:
  - Preliminary steps identified.
  - Timeframes assigned.
  - Draft 5-year plan being evaluated.

U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER 39

► Task 8

### Program Development & Initial Implementation

Initial Implementation: NJDOT Example (Cont'd)

- Specs for performance testing:

Mixture Type	PG (AASHTO R 79)	Spec. Air Voids	TSR (AASHTO T 283)	APA @ 8,000 Loading Cycles, 64°C (AASHTO T 340)*	GT (NJDOT B-10)	FRF Lab @ 15°C (AASHTO T 321)
BDWSC	-	≤ 2%	≥ 90%	≤ 3 mm	-	>100,000 cycles @ 1,500 micro-strains
HPFO	-	5.0 to 5.5%	≥ 85%	≤ 4 mm	≥ 600 cycles	-
BRFC	-	5.5 to 6.0%	≥ 85%	≤ 5 mm	≥ 700 cycles	-
BRBC	-	5.5 to 6.0%	≥ 85%	≤ 5 mm	≥ 100,000 cycles @ 100 micro-strains	-
HRAP	64-22*	6.5 to 8.5%	≥ 80%	≤ 7 mm	≥ 200 cycles	-
Surface Course	64-22*	6.5 to 8.5%	≥ 80%	≤ 4 mm	≥ 275 cycles	-
Intermediate and Base	64-22*	6.5 to 8.5%	≥ 80%	≤ 7 mm	≥ 100 cycles	-
Base	64E-22*	6.5 to 8.5%	≥ 80%	≤ 4 mm	≥ 150 cycles	-

\*Not applicable. \*100 psi base pressure and 100 lb per wheel load. \*PG of asphalt binder is not specified and is determined by the mix design and mix performance testing however a certificate of analysis showing the PG continuous grading for the asphalt binder used in the mix design has to be submitted to ensure asphalt binder consistency throughout the production process.

## Wrap-Up

U.S. Department of Transportation Federal Highway Administration RES-URCE CENTER

U.S. Department of Transportation Federal Highway Administration

RES-URCE CENTER

## Takeaways to Consider:

- Often reading a specification is not enough.
- BMD is far more than the tests or criteria the states uses.
- Establishing and maintaining goals for BMD is important (*Even if they change over time*).
- Differences in BMD from agency to agency are often for good reason:
  - A context specific mix design approach should be context specific to the state as well.
